The Handbook of Insurance-Linked Securities Pauline Barrieu 2010-06-15 "Luca Albertini and Pauline Barrieu are to be congratulated on this volume. Written in a period where structured projects in finance are having a difficult time, it is worthwhile to return to the cradle of securitisation: insurance. Spread out over three parts (life, non- life, and tax and regulatory issues) the 26 chapters, written mainly by practitioners, give an excellent overview of this challenging field of modern insurance. Methodology and examples nicely go hand in hand. The overall slant being towards actual analyses of concrete products. No doubt this book will become a milestone going forward for actuarial students, researchers, regulators and practitioners alike." —Paul

Embrechts, Professor of Mathematics and Director of RiskLab, ETH Zurich The convergence of insurance with the capital markets has opened up an alternative channel for insurers to transfer risk, raise capital and optimize their regulatory reserves as well as offering institutions a source of relatively liquid investment with limited correlation with other exposures. One of the financial instruments allowing for the cession of insurance-related risks to the capital markets is Insurance-Linked Securities (ILS). This book provides hands-on information essential for market participants, drawing on the insights and expertise of an impressive team of international market players, representing the various aspects and perspectives of this growing sector. The book presents the state of the art in Insurance-Linked Securitization, by exploring the various roles for the different parties involved in the transactions, the motivation for the transaction sponsors, the potential inherent pitfalls, the latest developments and transaction structures and the key challenges faced by the market. The book is organized into parts, each covering a specific topic or sector of the market. After a general overview of the ILS market, the Insurance-Linked Securitization process is studied in detail. A distinction is made between non-life and life securitization, due to the specificities of each sector. The process and all the actors involved are identified and considered in a comprehensive and systematic way. The concepts are first looked at in a general way, before the analysis of relevant case studies where the ILS technology is applied. Particular focus is given to: the key stages in both non-life and life securitizations, including the general features of the transactions, the cedant's perspectives, the legal issues, the rating methodologies, the choice of an appropriate trigger and the risk modeling, the particular challenges related to longevity securitization, the investor's perspective and the question of the management of a portfolio of ILS, the general issues related to insurance-linked securitization, such as accounting and tax issues, regulatory issues and solvency capital requirements. The book is accompanied by a website www.wiley.com/go/albertini_barrieu_ILS which will feature updates and additions to the various contributions to follow market developments.

On the Road Less Traveled Ed Hajim 2021-03-02 A powerful story touched with family trauma, deprivation, and adversity balanced by a life of hard work and philanthropy! On the Road Less Traveled is the inspirational story of Edmund A. Hajim, an American financier and philanthropist who rises from dire childhood circumstances to achieve professional success and personal fulfillment. At age three, Hajim is kidnapped by his father, driven from St. Louis to Los Angeles, and told that his mother is dead. His father soon abandons him in order to seek employment—mostly in vain—leaving his son behind in a string of foster homes and orphanages. This establishes a pattern of neglect and desertion that continues for Hajim's entire childhood, forever leaving its mark. From one home to another, the lonely boy learns the value of self-reliance and perseverance despite his financial deprivation and the trauma of being an orphan. As time passes, Hajim displays a powerful instinct for survival and a burning drive to excel. A highly motivated student and athlete, he earns an NROTC college scholarship to the University of Rochester; serves in the United States Navy; works as an application research engineer; then attends Harvard Business School, where he finds that the financial industry is his true calling. So begins his rapid ascent in the corporate world, which includes senior executive positions at E. F. Hutton, Lehman Brothers, and fourteen years as CEO of Furman Selz, growing the company more than tenfold. He also creates a happy and abundant family life, though he never forgets what it means to struggle. At age sixty, he is reminded of his painful past when a family secret emerges that brings the story full circle.

Service Availability Maria Toeroe 2012-03-12 Our society increasingly depends on computer-based systems; the number of applications deployed has increased dramatically in recent years and this trend is accelerating. Many of these applications are expected to provide their services continuously. The Service Availability Forum has recognized this need and developed a set of specifications to help software designers and developers to focus on the value added function of applications, leaving the availability management functions for the middleware. A practical and informative reference for the Service Availability Forum specifications, this book gives a cohesive explanation of the founding principles, motivation behind the design of the specifications, and the solutions, usage scenarios and limitations that a final system may have. Avoiding complex mathematical explanations, the book takes a pragmatic approach by discussing issues that are as close as possible to the daily software design/development by practitioners, and yet at a level that still takes in the overall picture. As a result, practitioners will be able to use the specifications as intended. Takes a practical approach, giving guidance on the use of the specifications to explain the architecture, redundancy models and dependencies of the Service Availability (SA) Forum services Explains how service availability provides fault tolerance at the service level Clarifies how the SA Forum solution is supported by open source implementations of the middleware Includes fragments of code, simple example and use cases to give readers a practical understanding of the topic Provides a stepping stone for applications and system designers, developers and advanced students to help them understand and use the specifications

The Collaborative Enterprise Charles C. Heckscher 2007-01-01 Organizing for competitive advantage and profit How can businesses best tap diverse capabilities to generate new ideas, manufacture products, and properly execute strategy? In this groundbreaking, thoroughly researched book, organizational expert Charles Heckscher argues that, in a global network of creation and production, the dominant organizations will be those that master the still-uncodified skills of collaboration--replacing the giants of the past century who thrived on the mastery of bureaucratic systems. Though there has been much discussion of teamwork and alliances in recent decades, Heckscher argues that we are still a long way from fully understanding how to manage fluid and inconstant collaborations; and that this is an area dominated far more by rhetoric than reality. Using a combination of theory and extensive real-life case studies, Heckscher pushes the boundary of organization design and illustrates how companies are able to create new, effective patterns of interactions, and how they can build a culture and infrastructure necessary to support them. For organizational leaders in search of long-term competitive advantage, The Collaborative Enterprise offers sound research findings and invaluable insights.

The Future of Cross-Border Insolvency Irit Mevorach 2018 A fresh and insightful guide to post-financial crisis cross-border insolvency, this book interrogates the current regime and sets out a pattern to improve its future. In recent decades, and especially since the global financial crisis, a number of important initiatives have focused ondeveloping effective solutions for managing the insolvency of multinational enterprises and financial institutions. Irit Mevorach here takes stock of the varying success of previous policy, and identifies the gaps and biases that could be bridged by a new approach.The book first sets out the theoretical debates regarding cross-border insolvency and surveys the strengths and weaknesses of the prevailing method - modified universalism - synthesizing divergences into a rubric for both commercial entities and financial institutions. Adhering to these norms morerobustly, Mevorach argues, would enhance global welfare and produce the best outcomes for businesses and institutions.Drawing upon sources from international law as well as behavioural and economic theory, Mevorach considers how to translate modified universalism into binding international

law and how to choose the right instrument for cross-border insolvency; the impact instrument design has on decisions andchoices, and how to encourage compliance. In particular, the book proposes tools and mechanisms that could potentially overcome, or at least take into account, behavioural biases in decision-making in order to create a system that works for businesses, and offers a blueprint for the future ofcross-border insolvency.

Stakeholder Capitalism Klaus Schwab 2021-01-27 Reimagining our global economy so it becomes more sustainable and prosperous for all Our global economic system is broken. But we can replace the current picture of global upheaval, unsustainability, and uncertainty with one of an economy that works for all people, and the planet. First, we must eliminate rising income inequality within societies where productivity and wage growth has slowed. Second, we must reduce the dampening effect of monopoly market power wielded by large corporations on innovation and productivity gains. And finally, the short-sighted exploitation of natural resources that is corroding the environment and affecting the lives of many for the worse must end. The debate over the causes of the broken economy—laissez-faire government, poorly managed globalization, the rise of technology in favor of the few, or yet another reason—is wide open. Stakeholder Capitalism: A Global Economy that Works for Progress, People and Planet argues convincingly that if we don't start with recognizing the true shape of our problems, our current system will continue to fail us. To help us see our challenges more clearly, Schwab—the Founder and Executive Chairman of the World Economic Forum—looks for the real causes of our system's shortcomings, and for solutions in best practices from around the world in places as diverse as China, Denmark, Ethiopia, Germany, Indonesia, New Zealand, and Singapore. And in doing so, Schwab finds emerging examples of new ways of doing things that provide grounds for hope, including: Individual agency: how countries and policies can make a difference against large external forces A clearly defined social contract: agreement on shared values and goals allows government, business, and individuals to produce the most optimal outcomes Planning for future generations: short-sighted presentism harms our shared future, and that of those yet to be born Better measures of economic success: move beyond a myopic focus on GDP to more complete, human-scaled measures of societal flourishing By accurately describing our real situation, Stakeholder Capitalism is able to pinpoint achievable ways to deal with our problems. Chapter by chapter, Professor Schwab shows us that there are ways for everyone at all levels of society to reshape the broken pieces of the global economy and—country by country, company by company, and citizen by citizen—glue them back together in a way that benefits us all.

The Island of Missing Trees Elif Shafak 2021-11-02 A REESE'S BOOK CLUB PICK Shortlisted for the Women's Prize for Fiction "A wise novel of love and grief, roots and branches, displacement and home, faith and belief. Balm for our bruised times." -David Mitchell, author of Utopia Avenue A rich, magical new novel on belonging and identity, love and trauma, nature and renewal, from the Booker-shortlisted author of 10 Minutes 38 Seconds in This Strange World. Two teenagers, a Greek Cypriot and a Turkish Cypriot, meet at a taverna on the island they both call home. In the taverna, hidden beneath garlands of garlic, chili peppers and creeping honeysuckle, Kostas and Defne grow in their forbidden love for each other. A fig tree stretches through a cavity in the roof, and this tree bears witness to their hushed, happy meetings and eventually, to their silent, surreptitious departures. The tree is there when war breaks out, when the capital is reduced to ashes and rubble, and when the teenagers vanish. Decades later, Kostas returns. He is a botanist looking for native species, but really, he's searching for lost love. Years later a Ficus carica grows in the back garden of a house in London where Ada Kazantzakis lives. This tree is her only connection to an island she has never visited--- her only connection to her family's troubled history and her complex identity as she seeks to untangle years of secrets to find her place in the world. A moving, beautifully written, and delicately constructed story of love, division, transcendence, history, and eco-consciousness, The Island of Missing Trees is Elif Shafak's best work yet.

Drawdown Paul Hawken 2017-04-18 • New York Times bestseller • The 100 most substantive solutions to reverse global warming, based on meticulous research by leading scientists and policymakers around the world "At this point in time, the Drawdown book is exactly what is needed; a credible, conservative solution-by-solution narrative that we can do it. Reading it is an effective inoculation against the widespread perception of doom that humanity cannot and will not solve the climate crisis. Reported by-effects include increased determination and a sense of grounded hope." —Per Espen Stoknes, Author, What We Think About When We Try Not To Think About Global Warming "There's been no real way for ordinary people to get an understanding of what they can do and what impact it can have. There remains no single, comprehensive, reliable compendium of carbon-reduction solutions across sectors. At least until now. . . . The public is hungry for this kind of practical wisdom." —David Roberts, Vox "This is the ideal environmental sciences textbook—only it is too interesting and inspiring to be called a textbook." —Peter Kareiva, Director of the Institute of the Environment and Sustainability, UCLA In the face of widespread fear and apathy, an international coalition of researchers, professionals, and scientists have come together to offer a set of realistic and bold solutions to climate change. One hundred techniques and practices are described here—some are well known; some you may have never heard of. They range from clean energy to educating girls in lower-income countries to land use practices that pull carbon out of the air. The solutions exist, are economically viable, and communities throughout the world are currently enacting them with skill and determination. If deployed collectively on a global scale over the next thirty years, they represent a credible path forward, not just to slow the earth's warming but to reach drawdown, that point in time when greenhouse gases in the atmosphere peak and begin to decline. These measures promise cascading benefits to human health, security, prosperity, and well-being—giving us every reason to see this planetary crisis as an opportunity to create a just and livable world.

Parametric Lie Group Actions on Global Generalised Solutions of Nonlinear PDEs Elemer Elad Rosinger 1998-10-31 Presents a solution of the harder part of the problem of defining globally arbitrary Lie group actions on such nonsmooth entities as generalized functions. This work addresses those who are interested in solving nonlinear PDEs, and in particular, in studying the Lie group symmetries of their classical or generalized solutions. This new method extends and completes earlier results of the author and collaborators, in which global Lie group actions on generalized functions were only defined in the case of projectable or fiber preserving Lie group actions.
