Post-Acute and Long-Term Medicine

Pamela A. Fenstemacher 2015-12-12 This book addresses current issues surrounding hospital readmissions and the practice of post-acute and long-term care (LTC). Thoroughly updated, the Second Edition of this practical pocket guide presents new regulations governing these services and lessens the uncertainty involved in caring

for patients in a long-term care facility. The book is divided into four sections that cover: types of care, which include community care, nursing facility care, and teamwork; clinical medicine, with suggested approaches to common conditions and wound care; psychosocial aspects of care, which include ethical and legal issues and caring for families; and special issues, with chapters on documentation, coding, and medication management. As community-based care is an area of rapid growth where the elderly are increasingly seeking their medical care, new chapters have also been added that describe these programs. Written by expert contributors, many of whom have worked within the American Medical Directors Association to create and disseminate a knowledge base for post-acute and LTC, this is a valuable resource for clinicians and educators seeking to maximize the care and living experience of

residents in post-acute and long-term care settings.

[Improving the Quality of Long-Term Care](#)
Institute of Medicine 2001-02-27 Among the issues confronting America is long-term care for frail, older persons and others with chronic conditions and functional limitations

that limit their ability to care for themselves. Improving the Quality of Long-Term Care takes a comprehensive look at the quality of care and quality of life in long-term care, including nursing homes, home health agencies, residential care facilities, family members and a variety of others. This book describes the current state of long-term care, identifying problem areas and offering recommendations for federal and state policymakers. Who uses long-term care? How have the characteristics of this population changed over time? What paths do people follow in long term care? The committee provides the latest information on these and other key questions. This book explores strengths and limitations of available data and research literature especially for settings other than nursing homes, on methods to measure, oversee, and improve the quality of long-term care. The committee makes recommendations on

setting and enforcing standards of care, strengthening the caregiving workforce, reimbursement issues, and expanding the knowledge base to guide organizational and individual caregivers in improving the quality of care.
