American Military History Volume 1 Army Center of Military History 2016-06-05 American Military History provides the United States Army-in particular, its young officers, NCOs, and cadets-with a comprehensive but brief account of its past. The Center of Military History first published this work in 1956 as a textbook for senior ROTC courses. Since then it has gone through a number of updates and revisions, but the primary intent has remained the same. Support for military history education has always been a principal mission of the Center, and this new edition of an invaluable history furthers that purpose. The history of an active organization tends to expand rapidly as the organization grows larger and more complex. The period since the Vietnam War, at which point the most recent edition ended, has been a significant one for the Army, a busy period of expanding roles and missions and of fundamental organizational changes. In particular, the explosion of missions and deployments since 11 September 2001 has necessitated the creation of additional, open-ended chapters in the story of the U.S. Army in action. This first volume covers the Army's history from its birth in 1775 to the eve of World War I. By 1917, the United States was already a world power. The Army had sent large expeditionary forces beyond the American hemisphere, and at the beginning of the new century Secretary of War Elihu Root had proposed changes and reforms that within a generation would shape the Army of the future. But world war-global war-was still to come. The second volume of this new edition will take up that story and extend it into the twenty-first century and the early years of the war on terrorism and includes an analysis of the wars in Afghanistan and Iraq up to January 2009.

The Inspectors General of the United States Army, 1777-1903 David A. Clary 1987 A study of the establishment of inspection practices in the United States Army told chronologically, in large part through the experiences of officers assigned to the inspection service. The record of the inspectorate illustrates those daily concerns that influenced the institutional development of the Inspector General Corps as a whole.

Chromatographic Methods in Clinical Chemistry and Toxicology Roger Bertholf 2007-01-30 This book aims to fill the gap that exists between theoretical treatments of chromatography, and clinical chemistry and toxicology texts, which focus almost exclusively on clinical relevance and applications. Chromatography has a vast array of clinical applications, and though the chromatographic methods were first introduced decades ago, new applications of this technology are being used to explore previously inaccessible frontiers in clinical diagnostics and toxicological testing. An up-to-date book devoted to clinical and toxicological applications of chromatographic methods will serve as an instructional and reference text, useful to students, laboratory technicians, and researchers.

The Staff Ride William Glenn Robertson 2014-12-11 Discusses how to plan a staff ride of a battlefield, such as a Civil War battlefield, as part of military training. This brochure

demonstrates how a staff ride can be made available to military leaders throughout the Army, not just those in the formal education system.

Generations Neil Howe 1992-09-30 Hailed by national leaders as politically diverse as former Vice President Al Gore and former House Speaker Newt Gingrich, *Generations* has been heralded by reviewers as a brilliant, if somewhat unsettling, reassessment of where America is heading. William Strauss and Neil Howe posit the history of America as a succession of generational biographies, beginning in 1584 and encompassing every-one through the children of today. Their bold theory is that each generation belongs to one of four types, and that these types repeat sequentially in a fixed pattern. The vision of *Generations* allows us to plot a recurring cycle in American history -- a cycle of spiritual awakenings and secular crises -- from the founding colonists through the present day and well into this millenium. *Generations* is at once a refreshing historical narrative and a thrilling intuitive leap that reorders not only our history books but also our expectations for the twenty-first century.

Spearhead of Logistics Benjamin King 2016-02-25 *Spearhead of Logistics* is a narrative branch history of the U.S. Army's Transportation Corps, first published in 1994 for transportation personnel and reprinted in 2001 for the larger Army community. The Quartermaster Department coordinated transportation support for the Army until World War I revealed the need for a dedicated corps of specialists. The newly established Transportation Corps, however, lasted for only a few years. Its significant utility for coordinating military transportation became again transparent during World War II, and it was resurrected in mid-1942 to meet the unparalleled logistical demands of fighting in distant theaters. Finally becoming a permanent branch in 1950, the Transportation Corps continued to demonstrate its capability of rapidly supporting U.S. Army operations in global theaters over the next fifty years. With useful lessons of high-quality support that validate the necessity of adequate transportation in a viable national defense posture, it is an important resource for those now involved in military transportation and movement for ongoing expeditionary operations. This text should be useful to both officers and noncommissioned officers who can take examples from the past and apply the successful principles to future operations, thus ensuring a continuing legacy of Transportation excellence within Army operations. Additionally, military science students and military historians may be interested in this volume.

Practise to Deceive Barton Whaley 2016-01-15 Some cultures are clearly more deceptive than others but only during any given slice of time. No single culture has excelled in deceptiveness throughout its history. While the Chinese did rise to the highest level of military deviousness during the time of Sun Tzu (c.350 BC), they had low levels before Master Sun, and afterwards largely lost it during three long periods, only to regain it each time. The most recent Chinese loss was when they fell to the lowest level from the late 1700s until being conquered in 1948 by the stratagemic Chinese Communists (PLA). Thence the PLA has displayed high if not the highest levels of deceptiveness, although there are indications that, beginning in 2002, they are again on the upswing. The levels of guilefulness at any given time can be quite different across the major disciplines of military, domestic politics, foreign diplomacy, and commercial business. Perceived practical considerations of greed and survival do sometimes override religious, moral, or ethical factors to produce deceptive behavior. The levels of guilefulness at any given point in time between any two contemporary armed entities (nations, insurgents, or terrorists) are apt to be asymmetric. Deception sophistication is independent of technological change. Within each culture deception varies widely in its levels of sophistication. High, medium, and low levels were found in every culture at different times and regardless of its level of technology. The reason? Because deception is a mind game, it is played only between or among humans. And this condition will remain as long as machines such as computers lack artificial intelligence. Because deception is a mind game, the variations in guilefulness between opposing individuals or groups can be crucial in deciding the victor in combat.

From Antarctica to Outer Space Albert A. Harrison 2012-12-06 *From Antarctica to Outer Space: Life in Isolation and Confinement* aims to revitalize and encourage behavioral research in spaceflight as well as in polar and comparable settings. It comprises a broad collection of papers that evolved from presentations at a three day conference entitled *The Human Experience in Antarctica: Applications to Life in Space* (The Sunnyvale Conference). This conference was co-sponsored by the

Division of Polar Programs of the National Science Foundation and the National Aeronautics and Space Administration and held in 1987. The book provides, through firsthand accounts and research reviews, an introduction to the human facet in isolated and confined environments such as Antarctica, outer space, submarines, and remote national parks. The book discusses some of the theoretical issues underlying research on isolated and confined people, thus demonstrating the applicability of certain general theories of behavior. It also focuses on basic psychological and social responses to isolation and confinement. Studies whose primary purpose is to explore the effects of selection, training, and environmental design on human behavior and mission outcomes are discussed.

Southern Forest Science 2004 "Southern forests provide innumerable benefits. Forest scientists, managers, owners, and users have in common the desire to improve the condition of these forests and the ecosystems they support. A first step is to understand the contributions science has made and continues to make to the care and management of forests. This book represents a celebration of past accomplishments, summarizes the current state of knowledge, and creates a vision for the future of southern forestry research and management. Chapters are organized into seven sections: "Looking Back," "Productivity," "Forest Health," "Water and Soils," "Socioeconomic," "Biodiversity," and "Climate Change." Each section is preceded by a brief introductory chapter. Authors were encouraged to focus on the most important aspects of their topics; citations are included to guide readers to further information."

Forests on the Edge Susan M. Stein 2005 The private working land base of America's forests is being converted to developed

uses, with implications for the condition and management of affected private forests and the watersheds in which they occur. The Forests on the Edge project seeks to improve understanding of the processes and thresholds associated with increases in housing density in private forests and likely effects on the contributions of those forests to timber, wildlife, and water resources. This report, the first in a series, displays and describes housing density projections on private forests, by watershed, across the conterminous United States. An interdisciplinary team used geographic information system (GIS) techniques to identify fourth-level watersheds containing private forests that are projected to experience increased housing density by 2030. Results indicate that some 44.2 million acres (over 11 percent) of private forests--particularly in the East, where most private forests occur--are likely to see dramatic increases in housing development in the next three decades, with consequent impacts on ecological, economic, and social services. Although conversion of forest land to other uses over time is inevitable, local jurisdictions and states can target efforts to prevent or reduce conversion of the most valuable forest lands to keep private working forests resilient and productive.

Assessment of Nontimber Forest Products in the United States

Under Changing Conditions James L. Chamberlain 2018-08-24

Nontimber forest products (NTFPs) are fundamental to the functioning of healthy forests and play vital roles in the cultures and economies of the people of the United States. However, these plants and fungi used for food, medicine, and other purposes have not been fully incorporated into management, policy, and resource valuation. This report is a forest-sectorwide assessment of the state of the knowledge regarding NTFPs science and management information for U.S. forests and rangelands (and hereafter referred to as the NTFP assessment). The NTFP assessment serves as a baseline science synthesis and provides information for managing nontimber forest resources in the United States. In addition, this NTFP assessment provides information for national-level reporting on natural capital and the ecosystem services NTFPs provide. The report also provides technical input to the 2017 National Climate Assessment (NCA) under development by the U.S. Global Change Research Program (USGCRP).

Forms of Curriculum Inquiry Edmund C. Short This book presents an overview of seventeen forms of inquiry used in curriculum research in education. Conventional disciplinary forms of inquiry, such as philosophical, historical, and scientific, are described, as well as more recently acknowledged forms such as ethnographic, aesthetic, narrative, phenomenological, and hermeneutic. Interdisciplinary forms such as theoretical, normative, critical, deliberative, and action research are also included. These forms of inquiry are distinguished from one another in terms of purposes, types of research questions addressed, and the processes and logic of procedure employed in arriving at knowledge claims.
